

Tytan In-line Water Heater

Safest and most reliable industrial water heater on the market! Compact and complete (turn-key) heating system designed with commercially-pure titanium heating elements for exceptionally clean and corrosion-free performance. Suitable for either single pass or recirculating flow demands for a variety of precision water heating applications.

FEATURES

Complete (turn-key) System

Space saving design minimizes footprint requirements Allows for fast and easy installation Only plumbing and main power required

Long-Lasting Titanium Element Construction

Resistant to corrosion Minimizes ionic contamination

Compatible with seawater

PID Temperature Control

Provides precise and stable temperature for improved process consistency and yields

Minimizes temperature fluctuations with flow rate changes

Engineered for Safe Operation

Meets cULus safety standards

Built-in ground-fault protection

Independent and redundant over-temperature protection Internal pressure relief valve

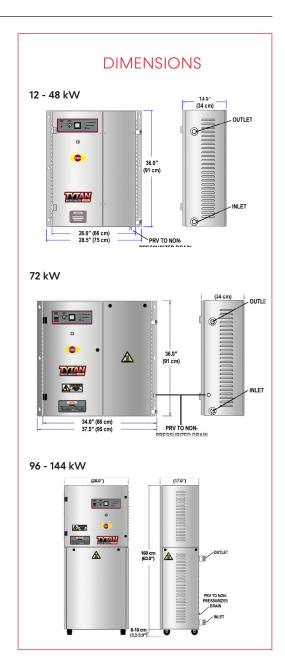

APPLICATIONS

- Solar/Photovoltaic Wafer and Flat Panel Display Rinsing
- Medical Device Cleaning (ultrasonic) and Sanitizing
- RO/DI Water Treatment (filtration)
- Batch Mixing
- Aquaculture (fresh and seawater aquaria exhibits, hatcheries and research facilities)
- Potable Water Heating

Tytan Inline Water Heater

SPECIFICATIONS

Wattages	12 kW to 144 kW
Voltages	208 volts to 480 volts, 3 phase
Temperature Range	Up to 90° C PID microprocessor based digital control
Pressure Range	Up to 689 kPa (100PSIG)
Fluid Connections	25.4mm (1 inch) through 72 kW, 50.8mm (2 inch) MNPT 96 kW and higher
Safety Features	Grounded construction
	EMO emergency stop button
	Fluid overtemperature detection (bi-metallic snap switches)
	Control fusing and ground fault protection
